

FEATURING A 52" WALL

THE WENTWORTH

presented by:

the story...

Wentworth Falls is a three-tiered waterfall fed by the Jamison Creek, near the town of Wentworth Falls in the Blue Mountains region of New South Wales, Australia. The total height of the waterfall is 614 ft. Near the falls, there is a rocky knoll that has a large number of grinding grooves created by rubbing stone implements on the rock to shape and sharpen them. These marks have been determined to be signs of early human habitation nearby.
